

CMS User Manual

A step-by-step guide to running the Corporate DNA website content — written for everyone, no technical background needed.

For Editors

For Admins

Welcome

This manual teaches you how to run the Corporate DNA website content on your own, without a developer. It covers **everything both roles do**:

- **Editors** — create and publish content (cases, solutions, people, insights, and more).
- **Admins** — everything an editor does, **plus** manage users, languages, and the audit log.

Sections that only admins can use are marked  **ADMIN ONLY**. If you are an editor, you can skip those — you will not see those screens.

How to read this manual. Follow it in order the first time. After that, use the contents below to jump to what you need. Every screen appears as a **screenshot placeholder** — a dashed red box with a precise caption telling a teammate exactly what to capture and paste in its place.

Optional: the Dashboard or a friendly product shot, to open the manual with a visual.

20  Managing languages

21 Troubleshooting & FAQ

22 Golden rules cheat sheet

1 Before you start: key ideas in plain language

Read this once. These five ideas make everything else obvious.

Idea	What it means
Draft vs. Published	A draft is your private work-in-progress — nobody visiting the public site can see it. When you publish , it goes live. You can always return to a draft by unpublishing .
Two roles	Editor = writes and publishes content. Admin = everything an editor does, plus manages accounts and settings.
Two-step login (MFA)	Every sign-in needs your password and a 6-digit code from an app on your phone. Required for everyone — it keeps the site safe.
Everything is versioned	Every save is kept in history. Made a mistake? Restore an older version. Nothing is ever truly lost.
The site updates itself	When you publish, the public website refreshes on its own within moments. You never need to "push" anything.

2 Signing in

Once your account exists (see Section 3 if this is your first time), signing in takes two quick steps.

Step 1 — Email and password

1. Open the CMS address in your browser (your admin gives you the link).
2. Type your **Email** and **Password**.
3. Click **Continue**.

A screenshot of the 'CMS sign in' screen. At the top, it says 'CORPORATE DNA' in red, followed by 'CMS sign in' in bold black. Below this are two input fields: 'Email' and 'Password'. Under the 'Password' field is a red button with the text 'Continue'. At the bottom, there is a link that says 'Forgot your password?'.

CORPORATE DNA
CMS sign in

Email

Password

Continue

[Forgot your password?](#)

The “**CMS sign in**” screen: Email field, Password field, the **Continue** button, and the “Forgot your password?” link below it.

Step 2 — Your 6-digit code

4. The screen now asks for a **Verification code**.
5. Open your authenticator app (Google Authenticator, 1Password, Microsoft Authenticator...) and read the current 6-digit code for “Corporate DNA”.
6. Type the 6 digits and click **Verify**.

CORPORATE DNA
CMS sign in

Verification code

Enter the 6-digit code from your authenticator app.

Verify

The verification screen with the “Enter the 6-digit code from your authenticator app” hint, the code box, and the **Verify** button.

You are now on the **Dashboard**. 🎉

Codes are shared across your whole office network. There is a limit of **15 code attempts per hour for the entire network**, not per person. If you see a “rate-limited” message, **wait** — retrying makes it worse for everyone.

3 Your first sign-in (new accounts)

New accounts are **never** created by handing someone a password. An admin sends you an **email invitation**, and you set up everything yourself. No one — not even an admin — ever sees your password or your codes.

A. Open the invitation email

Find the invitation email and click its link.

The invitation email with the “accept invite / set password” button highlighted.

B. Choose your own password

Pick a strong password and confirm it. This becomes yours alone.

CORPORATE DNA

Set a new password

New password

Confirm new password

Save password

The “set your password” screen.

C. Set up your authenticator app (one-time)

1. You land on “**Set up your second factor**”. A **QR code** appears.
2. In your authenticator app choose “add / scan” and point the camera at the QR code.
Can't scan? Click “**Can't scan? Enter a key instead**” and type the setup key into your app by hand.
3. Your app now shows a 6-digit code. Type it into **Verification code**.
4. Click **Finish setup**.

CORPORATE DNA

Set up your second factor

Your account needs an authenticator app before you can use the CMS. This is a one-time setup.

Scan this with Google Authenticator, 1Password, or any TOTP app.

Can't scan? Enter a key instead

Verification code

Enter the 6-digit code your app is showing now.

Finish setup

Code attempts are limited to 15 per hour across your whole network, not per person. If you see a rate-limit message, wait rather than retrying.

The “Set up your second factor” screen: the QR code, the “Can't scan? Enter a key instead” link, the code box, and the **Finish setup** button.

Until you finish this one-time setup, the CMS stays locked. That's normal and by design. Future sign-ins only need your password + a fresh code.

4 If you get locked out

Problem	What to do
Forgot your password	On the sign-in screen click “Forgot your password?” . A reset link arrives by email; it works once then expires. You’ll still need your 6-digit code — a reset never skips the second step.
Lost or replaced your phone	Ask an admin to Reset your second factor (Section 18). Your next sign-in walks you through scanning a fresh QR code.
“Rate-limited” message	Too many code attempts across the office network. Wait (up to an hour) instead of retrying.
Your account was disabled	An admin turned your account off. Contact an admin to re-enable it.

CORPORATE DNA

Reset your password

Email

We'll send a link to set a new password.

Send reset link

[Back to sign in](#)

The password-recovery screen reached from the “Forgot your password?” link.

5 Getting around the CMS

Every screen has the same **left-hand menu**. Your email shows in it, so you always know which account you're using.

Menu item	What's inside	Who sees it
Dashboard	Home screen with a card per content type.	Everyone
Case studies	Client success stories.	Everyone
Solutions	Your service / solution pages.	Everyone
People	Team member profiles.	Everyone
Regions	The regions shown on the home-page world map.	Everyone
Insights	Articles / blog posts.	Everyone
Legal pages	Privacy, Cookies, Terms.	Everyone
Media	Library of uploaded images and files.	Everyone
Contacts	Messages sent through the site's contact form.	Everyone
Languages	Add and manage site languages.	 Admin only
Users & audit	Manage accounts and view the activity log.	 Admin only

Users & audit

The full left navigation menu — ideally as an **admin** so Languages and Users & audit are visible — with your email shown.

The **Dashboard** shows a card for each main content type. Click any card to jump into that type's list.

The Dashboard grid of content cards (Case studies, Solutions, People, Regions, Insights, Legal pages).

6 The content types, explained

There are two shapes of content.

Collections — you can have *many* of these

- **Case studies** — a client challenge, your approach, the result, a quote, cover/brand imagery, and optional video. Cases also carry **facets** (industry / service / region / outcome) that power the filterable library on the site.
- **Solutions** — the services you offer.
- **People** — team profiles (name, role, bio, photo, social links). These can be **re-ordered by hand**.
- **Regions** — the regions that appear on the interactive **world map on the home page** (this is *not* the site's “Offices” section).
- **Insights** — articles / blog posts, with author, cover image, and an optional YouTube video.

Single pages (singletons) — exactly *one* of each

- The **Legal pages: Privacy, Cookies, and Terms**.
- You edit the single entry — you never create new ones — and you reach them from **Legal pages** in the menu.

7 The core workflow: create, save, preview, publish

This one workflow is the same for every content type. Learn it once and you can edit anything.

Step 1 — Open a type and start a new entry

1. Click the type in the left menu (e.g. **Insights**).
2. You'll see a list of existing entries. Click **New** (top right). If the list is empty, a **New** button sits in the middle under "Nothing here yet".

An Insights (or Case studies) list showing the columns **Title** · **Languages** · **Updated** · **Actions** and the **New** button top-right.

On a brand-new entry a **Language** dropdown may appear at the top. Pick the language you're writing in (usually the default). You only see this when more than one language is set up.

Step 3 — Fill in the fields

Fill in the fields. Required fields are marked with a red asterisk *. A **status badge** near the title shows **Draft** or **Published**, and “**Unsaved changes**” appears while you type.

Save draft

Publish

A content edit screen: the title heading, the status badge, several fields (including a required one with a red *), and the sticky bottom action bar with **Save draft** and **Publish**.

Auto-save. The CMS quietly saves your draft about **10 seconds** after you stop typing, and whenever you click out of a field. Still click **Save draft** yourself before leaving, just to be safe.

Step 4 — Save your draft

Click **Save draft** (bottom bar). This stores your work. **It is not on the public website yet** — it's private. If anything required is missing, a red summary lists what to fix, with links straight to each field.

Step 5 — Preview (see it before it's live)

Click **Preview** (top right). A new tab shows the entry **exactly as it will appear on the website**, including your unpublished draft. The link is private. *Note:* some types (People, Regions) have no standalone page, so Preview won't appear for them.

Step 6 — Publish (make it live)

When you're happy, click **Publish**. Your content goes live within moments. Publishing is **blocked** if a required field is empty or a chosen image was deleted — the error names exactly what to fix (e.g. *"Can't publish. Please fix: Title, Body."*).

After publishing: making further edits

Once something is published and you edit it again:

- You'll see an **△ Unpublished changes** badge and a note: *"the site still shows the last published version."*
- Your edits are saved privately as a draft. When ready, click **Publish changes** to push them live.
- A green **● Live** badge means what you see is exactly what the public sees.

To take something **offline**, click **Unpublish** — it returns to draft and disappears from the public site (kept, not deleted).

The bottom action bar of a published entry with pending edits — the **△ Unpublished changes** badge, **Save draft**, **Publish changes** and **Unpublish** buttons, plus the amber "You have unpublished changes..." note.

8 Understanding every field type

The edit form is built from a handful of field types. Here's how to use each one.

Field type	Looks like	How to use it
Text	A single-line box.	Type a short line (a title, a name, a role).
Text area	A bigger multi-line box.	Type a longer plain paragraph (e.g. a quote).
Rich text	A box with a formatting toolbar.	Format text, add lists, links, images and YouTube videos (Section 9).
URL	A single-line box.	Paste a full web address, e.g. <code>https://...</code>
Email	A single-line box.	Type an email address.
Date	A date picker.	Click and choose a date from the calendar.
Media	A thumbnail + Choose media button.	Pick or upload an image / file (Section 10).
List (one per line)	A multi-line box.	Type one item per line (tags, address lines). Each line becomes a separate item.
Facets (cases only)	Four small boxes: industry / service / region / outcome.	Type comma-separated values in each, e.g. <code>Finance, Retail</code> . They power the site's filters.

Client Challenge

Shell Asia was an exciting and rapidly growing collection of markets for Shell. However, with Royal Dutch Shell headquartered in the Netherlands and incorporated in the UK, Shell APAC was keen on putting themselves on the radar by showcasing Asia's talent.

Shell is very big on diversity and inclusion (D&I) and has a 50:50 male to female ratio for new employees. Every year's intake has to build the funnel towards gender diversity.

CorporateDNA Solution

In 2019, Shell Asia partnered with Corporate DNA to curate a high intensity program called Talent Acceleration Program for Asia (TAPA), which was created with the strategic intent of bringing more Asian Talent to the forefront. In a very human centred way, we started with the leadership narrative of the chosen Asian delegates across 16 nationalities and these were filmed to help them find their authentic leadership identity.

Interestingly, one cohort received the program as an in room experience pre-COVID19 and the other received it as fully virtual post-COVID19. The impact was seamlessly consistent across both formats and generated remarkable results.

Results

With an 88% Net Promoter Score at the end of the TAPA program, all participating leaders were able to identify and transform their limiting beliefs, fears and insecurities into purpose. By leading from a place of purpose and value, they have seen growth, grounded leadership and productivity that's higher than ever before.

Save draft

Unpublish

A form area with a text field, a rich-text field, a media field, and the four facet boxes visible at once (a Case study edit screen works well).

9 Writing with the rich-text editor

Rich-text fields (a Case's **Text**, an Insight's **Body**, a Person's **Bio**) have a toolbar for formatting.

Button	What it does
Heading (H2 / H3 / Normal)	Turn a line into a section heading, or back to normal text.
Bold / Italic / Underline	Emphasise selected text.
Ordered / Bullet list	Numbered or bulleted lists.
Blockquote	Indent a quotation.
Link	Turn selected text into a clickable link.
Image	Upload a picture into the text.
Video	Embed a YouTube video.
Clean	Remove formatting from the selected text.

Client Challenge

Shell Asia was an exciting and rapidly growing collection of markets for Shell. However, with Royal Dutch Shell headquartered in the Netherlands and incorporated in the UK, Shell APAC was keen on putting themselves on the radar by showcasing Asia's talent.

Shell is very big on diversity and inclusion (D&I) and has a 50:50 male to female ratio for new employees. Every year's intake has to build the funnel towards gender diversity.

A rich-text field with its toolbar visible — ideally with a heading, a bullet list, and an embedded image inside the text area.

Adding an image inside text

1. Click the **image** button in the toolbar.
2. Choose a file. It uploads automatically and appears in the text (never pasted raw).

Adding a YouTube video inside text

1. Click the **video** button.
2. Paste a **YouTube** URL when asked (watch,youtu.be, embed, or shorts all work).
3. Only YouTube links are accepted — anything else is rejected.

Removing an image or video

Hover over the image/video inside the editor. A red ✕ button appears in its corner — click it to remove that image or video.

Pasting always removes formatting. When you paste (from Word, a web page, an email...) it comes in as **plain text** with no colours, fonts, or hidden styles. This is intentional — it keeps the site consistent. Re-apply bold, headings, etc. with the toolbar afterwards.

10 Working with images and files (Media)

Every image on the site lives in the **Media library**. You can add images two ways.

A) Straight from a field (most common)

When a field is for an image (**Cover image, Photo, Brand logo**):

1. Click **Choose media**.
2. A **Media library** window opens.
3. Click an existing image, **or** click **Upload** to add a new one from your computer.
4. The window closes and your image is attached. To swap it click **Change**; to remove it click **Clear**.

The "Media library" pop-up (opened from a **Choose media** button): the **Upload** button at the top and a grid of thumbnails, with one selected (highlighted border).

B) From the Media menu (managing the whole library)

1. Click **Upload** (top right) to add a new file.
2. Each item shows its thumbnail, filename, and size. Click a thumbnail to open the full file.
3. Click **Delete** under an item to remove it.

Delete

The Media page: the **Upload** button and the grid of files, each with filename, size, and a **Delete** button.

Deleting media is permanent. It removes the file for good. If any content still uses that image, it shows a **broken image**. Make sure nothing needs a file before deleting it.

Rules to remember:

- **Videos are not uploaded here.** For video, paste a **YouTube URL** into the video field instead.
- Some fields are stricter — a **Brand logo** must be a **transparent PNG up to 1024×1024**. Files that break a rule are rejected with a reason.
- Always use a clear, descriptive filename — it helps everyone find images later.

11 Version history: undo and restore

Every time you save, the CMS keeps a snapshot. You can go back to any earlier one.

1. On an entry's edit screen, click **Version history** (top right).
2. A panel lists every version with its **date** and **author**.
3. Click **Restore** on any earlier version to bring its content back.

The Version history panel open over an edit screen, listing versions with dates/authors and a **Restore** button on each.

Restoring is safe. A restore is itself saved as a new version, so you never lose anything — you can even “undo the undo”. Any unsaved edits on screen are saved first before the restore, so nothing is thrown away.

12 Deleting content

1. Go to the type's list.
2. In the **Actions** column of the row, click **Delete**.
3. A confirmation box explains what will happen. Confirm to proceed.

The delete confirmation dialog ("Delete ...? This removes the entry and all of its language versions from the site.") with its **Delete** and cancel buttons.

⚠ Delete removes every language version of that entry from the site. To hide something temporarily, **Unpublish** it instead (Section 7) — that keeps it and lets you bring it back.

13 Field reference for each content type

A quick lookup. **Required fields are marked**  — the entry can't be published without them.

Case studies

Field	Type	Required	Notes
Tags	List		Keywords for the case.
Page title	Text		The case title.
Quote	Text area		A client quote.
Quoter	Text		Who said the quote.

14 Ordering People (drag and drop)

The **People** list is special: the order you set here is the order visitors see on the site.

- 1. Open **People**.
- 2. Grab a row and **drag it up or down** to reorder.
- 3. The new order saves automatically.

The People list in its drag-and-drop form, ideally mid-drag with a row lifted.

15 Legal pages

The **Legal pages** are “single” pages — each exists only **once**, so you edit that one entry and never create new ones.

1. Click **Legal pages** in the menu.
2. You'll see three cards: **Privacy**, **Cookies**, and **Terms**.
3. Click one to edit it. Each has a **Title** ☒ and a **Body** ☒ (rich text).

They use the same **Save draft** → **Preview** → **Publish** workflow as everything else.

The “Legal pages” screen with the Privacy, Cookies, and Terms cards.

16 Working in more than one language

The site can hold the same content in several languages. Each entry is one language; “translations” are linked copies in other languages.

Where you see languages

- In a **list**, the **Languages** column shows a chip per language with a **Draft/Published** badge. A dashed + **[Language]** chip means that translation doesn't exist yet — click it to create it.
- On an **edit screen**, a **Languages** bar at the top shows every language. The current one is marked **(current)**; click another to switch, or click a dashed language to create that translation.

An edit screen's top “Languages” bar: the current language marked “(current)”, one other existing language, and a dashed “+ language” chip to create a new translation.

Creating a translation

1. Click the dashed + **[Language]** chip (in the list or on the edit screen).
2. A new entry opens in that language, **pre-filled from the source** — you translate over the existing text.
3. Save, preview, and publish it just like any other entry.

💡 If a language isn't offered, an admin needs to add it first — see Section 20.

17 Contacts: the contact-form inbox

When someone fills in the **contact form on the public marketing site**, their message lands here. Everyone (editors and admins) can read these messages — think of it as a shared inbox.

1. Click **Contacts** in the left menu.
2. You'll see a table of every submission, newest first, with a count of messages at the top.

Column	What it shows
Name	Who sent the message.
Email	Their email — click it to reply straight from your email app.
Organisation	Their company, if they gave one (otherwise “—”).
Received	The date and time it arrived.

Submissions from the contact form on the marketing site. Open a row to read the full message, or delete submissions you have dealt with.

NAME	EMAIL	ORGANISATION	RECEIVED	
teste	teste@teste.com	dsadsadsa	30/07/2026, 16:48:46	HideDelete
Message Source Referer User agent				
dsadsadasdas / https://consulting-dna-corporate-alpha.vercel.app/ Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/151.0.0.0 Safari/537.36				
teste	teste@teste.com	dasdsadas	30/07/2026, 16:42:03	ViewDelete

A contact row expanded to show the full Message, Source, Referer, and User agent details.

Replying and clearing messages

- **To reply:** click the person's **email address** — your email app opens with a new message to them. (Replies happen in your own email, not inside the CMS.)
- **To clear one you've handled:** click **Delete** and confirm.

Delete is permanent. A deleted contact submission cannot be recovered. Only delete messages you've already dealt with.

Contacts are **read-only records** — you can't create or edit them here. You only read them, reply by email, and delete the ones you're done with. If the list is empty you'll see "No contact submissions yet."

18 Managing users ADMIN ONLY

Only **admins** see **Users & audit** in the menu. This is where you invite teammates and control access.

PreviousPage 1Next

The “Users & audit” screen: the **Invite user** form at the top and the users table (Email · Role · Status · Second factor · Delete) below.

Inviting a new user

1. In the **Invite user** box, type their **Email**.
2. Choose a **Role** — **Editor** or **Admin**.
3. Click **Send invitation**.

They receive an email, set their **own** password, and set up their **own** authenticator app on first sign-in. **You never handle their password or codes** — there's nothing to send separately.

Changing a user's role or access

Column	What it does
Role	Switch between Editor and Admin . You'll confirm — admins can manage users and see the audit log.
Status	Active (normal), Invited (hasn't finished setup), or Disabled . Disabling signs the person out and blocks sign-in until re-enabled.
Second factor → Reset	Use when someone loses their phone. Their old authenticator stops working immediately; they set up a new one on next sign-in.
Delete	Permanently removes the account. Their authored content and the audit trail are kept , with the author left blank.

Users

EMAIL	ROLE	STATUS	SECOND FACTOR
devemdobro@gmail.com	Admin ▾	Active ▾	Reset Delete
impulseaisolutions@gmail.com	Editor ▾	Active ▾	Reset Delete

A close-up of one user row: the Role dropdown, Status dropdown, the **Reset** button, and the **Delete** button. Optionally include a confirmation dialog.

 **Safety rule you can't override:** the system **refuses** to demote, disable, or delete the **last active admin**. This stops anyone locking the whole team out. **Always keep at least two admins.**

19 The audit log ADMIN ONLY

At the bottom of **Users & audit** is the **Recent audit** log — an automatic, permanent record of every important action (who did what, and when).

1. Each line shows the **time**, the **action**, the **target**, and **who** did it.
2. Click a line to **expand** it and see full details.
3. Use **Previous / Next** to page through history.

Recent audit

31/07/2026, 09:20:12 **entry.delete** entry 6b3bf45c by devemdobro@gmail.com ▲

When	31/07/2026, 09:20:12
Action	entry.delete
Actor	devemdobro@gmail.com · 322b7b22-6ecc-4caf-8227-9992062b89e5
Target	entry · 6b3bf45c-6205-4332-b2eb-d6e385340ab8
Details	<pre>{ "type": "case", "variantIds": ["42b9e7c5-9bc6-40bf-a9b2-ebfe6bc1016b"] }</pre>

The “Recent audit” list with one entry expanded to show its When / Action / Actor / Target / Details, plus the Previous/Next pager.

The audit log can't be edited or erased, and it survives even if a user is deleted (their email is kept as a snapshot). It answers “who changed this?” with certainty.

20 Managing languages

ADMIN ONLY

Only admins see **Languages** in the menu. This controls which languages editors can write in.

Languages

Users & audit

Languages

The languages editors can create and translate content in. One is the default (used as the fallback).

Add a language

Code

e.g. pt-BR, es, fr

Name

e.g. Português (Brasil)

Add language

CODE	NAME	DEFAULT	STATUS	ACTIONS
en	English	Default	Enabled	Delete
pt-BR	Português (Brasil)	Set default	Enabled	Delete
es	Spanish	Set default	Enabled	Delete

The Languages screen: the **Add a language** form and the table (Code · Name · Default · Status · Actions).

Adding a language

- 1. In **Add a language**, type a **Code** (e.g. `pt-BR`, `es`, `fr`) and a **Name** (e.g. `Português (Brasil)`).
- 2. Click **Add language**.

Managing existing languages

Column	What it does
Name	Click the name to edit it, then click away to save the rename.
Default	The default is the fallback shown when a translation is missing. Click Set default on another language to change it (it must be enabled first).
Status	Click Enabled / Disabled to toggle. Disabled languages disappear from editors' choices but keep their content.
Delete	Removes a language from the registry. Only languages with no content can be deleted — otherwise disable it instead.

Adding or enabling a language makes it appear immediately for editors — no rebuild or developer needed.

21 Troubleshooting & FAQ

"I published but the website hasn't changed."

Give it a moment and refresh the public page. Publishing triggers an automatic update. If it still doesn't show after a few minutes, tell an admin (it may be a webhook/config issue, not something you did).

"I can't publish — there's a red error."

A required field is empty, or an image you chose was deleted. The message names exactly what to fix. Correct those fields and click **Publish** again.

"It says 'Someone else saved this entry while you were editing.'"

Two people edited the same entry at once. Reload to get their changes, then re-apply yours. To avoid this, coordinate who edits what.

"My formatting disappeared when I pasted."

That's on purpose — pasting always drops formatting. Re-apply bold, headings, and lists with the toolbar.

"The Preview button isn't there."

Some types (People, Regions) have no standalone public page, so there's nothing to preview.

"I don't see Users & audit or Languages."

Those are **admin-only**. If you need something there, ask an admin.

"I lost my phone / can't get a code."

Ask an admin to **Reset** your second factor. You'll set up a new authenticator on next sign-in.

"Rate-limited when entering my code."

The limit is shared across the office network (15 attempts/hour). Wait rather than retrying.

"I deleted something by mistake."

For a whole entry: contact an admin — deletion is hard to reverse. For content *inside* an entry, use **Version history** → **Restore**. For media, a deleted file is gone; re-upload it.

22 Golden rules — one-page cheat sheet

-  **Sign in = password + 6-digit code.** Keep your authenticator app safe.
-  **Draft is private. Publish makes it live.** Preview before you publish.
-  **Red * = required.** You can't publish until required fields are filled.
-  **Add images via the field or Media library.** Videos = paste a YouTube link, never upload.
-  **Pasting removes formatting** — re-apply it with the toolbar.
-  **Every save is a version.** Made a mistake? **Version history** → **Restore**.
-  **Delete is forever and removes all languages.** To hide temporarily, **Unpublish** instead.
-  **Translations start pre-filled from the source** — translate over the text.
-  **Admins:** always keep **at least two admins**; the system won't let you remove the last one.
-  **Unsure?** Preview first, and ask an admin before deleting anything.

You're ready. Sign in, open a type, click **New**, and try the full **Save draft** → **Preview** → **Publish** loop on a test entry — it's the safest way to learn.
